

InterOil Corporation

Daxeam offers streamlined EAM process

Industry

Oil & Gas

Solution

Daxeam:

* Asset Management * ResourcePoint
Integration * Single, integrated platform with
Microsoft Dynamics AX

Straight Talk

“We are excited to be rolling out the ResourcePoint Asset Management module, built on the Daxeam solution to our Exploration and Construction divisions. With over 300 pieces of heavy earthmoving equipment operating within the Papua New Guinea jungle, our challenges require a robust application that streamlines the maintenance process. We believe that the UXC Eclipse team is our ideal partner to make this a reality.”

Patrick Slevin

Finance Systems Manager
InterOil

Challenge

“With a history of disparate applications, InterOil recognised a need for a fully integrated ERP system that would allow for future growth and bring into one environment the functionality that was required within our Oil and Gas sector business.”

Solution

“After a lengthy review process, Microsoft Dynamics AX was chosen - with UXC Eclipse as our preferred partner. The reasons were many and varied however one of the major selling points for us was UXC Eclipse’s ResourcePoint solution on offer, including the Asset Management module – Daxeam,” said Patrick Slevin, Finance Systems Manager, InterOil.

ResourcePoint is a customised vertical solution specifically developed for the oil and gas industry. Built on the Microsoft Dynamics AX platform, ResourcePoint provides deep functionality required by the oil and gas industry, including: standard financials and reporting to stock exchanges; operations reporting across all sites; multi-currency capabilities, maintenance scheduling and repairs; energy finance management (EFM); and enterprise asset management (EAM) – provided by EAM solution, Daxeam.

Outcome and Benefits

Daxeam is a global enterprise asset management (EAM) solution built for Microsoft Dynamics AX. Using Microsoft Dynamics AX as the foundation means Daxeam is integrated into the supply chain management functionality delivered across projects, inventory, finance and fixed assets.

“Full integration of Daxeam within the Microsoft Dynamics AX system allows us to manage our refinery maintenance programs seamlessly with our procurement and warehousing operations. For the first time in our operational history, we have both planned and ad-hoc maintenance events being recorded, scheduled and costed accurately. Our maintenance planning staff are able to schedule, review and analyse maintenance events in a timely manner.”

“A key requirement for us was being able to identify parts needed for maintenance and plan work orders around part availability. Work orders generate demand for the parts, and flow automatically into master planning and purchasing. On receipt of the parts into our warehouse, the parts are immediately identified as being available so the maintenance work order can commence.”

Daxeam looks like and integrates with familiar Microsoft Office tools, making accessing information easier than ever before. It also minimises training requirements and speeds up system adoption.

“We are excited to be rolling out the ResourcePoint Asset Management module, built on the Daxeam solution, to our Exploration and Construction divisions.”

InterOil Corporation

UXC Eclipse as a Partner

“UXC Eclipse has been invaluable in assisting and training our team of users. We operate in a remote area of the world and yet the UXC Eclipse team was happy to visit on-site during our implementation and as we progress, assist in getting more value from the product. Suggestions for how to improve the product have been taken on-board and, in some instances, we have seen those come through as enhancements.”

About InterOil:

InterOil Corporation (InterOil) is a NYSE-listed company that has developed an integrated oil and gas company with operations based in Papua New Guinea.

The company has positioned itself to own assets through the entire value chain - from the well-head to retail. InterOil has also positioned itself through a joint venture holding company to develop a LNG project in Papua New Guinea. The joint venture company is targeting 2015 for the delivery of ‘first gas’.

About Daxeam:

Daxeam is an enterprise asset management solution made for Microsoft Dynamics AX. It helps assess and develop asset maintenance needs, organise company assets, assist in normalising repeated, measurable asset maintenance. Daxeam analyses asset downtime, utilisation, costs and failures and helps maximise your Microsoft Dynamics AX Investment.

Using Microsoft Dynamics AX as the foundation means Daxeam is integrated into the supply chain management functionality delivered across projects, inventory, finance and fixed assets.

The most powerful EAM solution available to extend Microsoft Dynamics AX across the supply chain, Daxeam’s benefits include:

- A single, integrated solutions within your ERP
- Improved operational uptime from controlled asset utilisation
- Reliable programs through simulation of operational periods
- Reduction in inventory from purchase and approval control
- Knowledge management, document control and compliance
- Insight into utilisation, costs and forecasts.

Built on the Microsoft platform using out-of-the-box modules from Microsoft Dynamics AX, Daxeam looks like and integrates with familiar Microsoft Office tools, making accessing information easier than ever before.
